
Act 4 - the ladder mixes TWO architecture families
canonical family (MiniGPT, learned absolute positions)
other family (no learned position table)
Validation loss (nats)
Training tokens D (millions)
shaded: the interior region the fit uses (D >= 5M);
y-axis clipped at 2.4 nats, so the initial transient
(loss > 200 nats) is off scale
Act 4 - the same ladder, log y
canonical family (MiniGPT, learned absolute positions)
other family (no learned position table)
Validation loss (nats)
Training tokens D (millions)
