Act 0: 12 configurations (3 orders x 4 smoothings); the three seeds per configuration are bit-identical
Act 0: order dominates smoothing
perplexity of the held-out 10% of TinyShakespeare
validation perplexity (log scale)
n-gram order
laplace
good-turing
kneser-ney
interpolated
Spread across 3 seeds is exactly 0.000
count-based n-grams are deterministic: no error bar to draw
