Act 4: the profile likelihood is the statement. On the TOTAL-N axis the compatible ALPHA range is [0.08, 0.54]: it contains Chinchilla's 0.34 and 0.50, so this ladder is COMPATIBLE WITH PUBLISHED EXPONENTS ACROSS THEIR ENTIRE RANGE AND DISCRIMINATES BETWEEN NONE OF THEM. The BETA range is [0.36, 0.56] and EXCLUDES Chinchilla's 0.28, so no compatibility claim may be made for beta. E is an EXTRAPOLATED asymptote: the corpus's measured unigram entropy is 4.9946 nats.
