6b reranking helps but never reaches greedy
n=16: +0.272 bits vs mean sample, -0.259 vs greedy
bits per character (lower = better)
n candidates sampled
best-of-n, reranked
mean of all n samples
greedy (1.437)
6c self-consistency cannot help at chance
voting converges to argmax = chance (0.3300)
MNLI accuracy
number of votes n
chance = 0.3333
self-consistency accuracy
